| All of them                            | 0.204598 | 0.000000 | 0.135632 | 0.013793 | 0.000000 | 0.533333 | 0.112644 |
| Books                                  | 0.204598 | 0.000000 | 0.073563 | 0.000000 | 0.000000 | 0.600000 | 0.121839 |
| Internet                               | 0.211494 | 0.055172 | 0.137931 | 0.000000 | 0.002299 | 0.494253 | 0.098851 |
| Notes given by teacher                 | 0.252874 | 0.000000 | 0.137931 | 0.000000 | 0.000000 | 0.508046 | 0.101149 |
| Notes prepare by yourself from lecture | 0.218391 | 0.000000 | 0.082759 | 0.000000 | 0.000000 | 0.604598 | 0.094253 |
| Research Paper                         | 0.193437 | 0.000000 | 0.105354 | 0.000000 | 0.000000 | 0.559585 | 0.141623 |

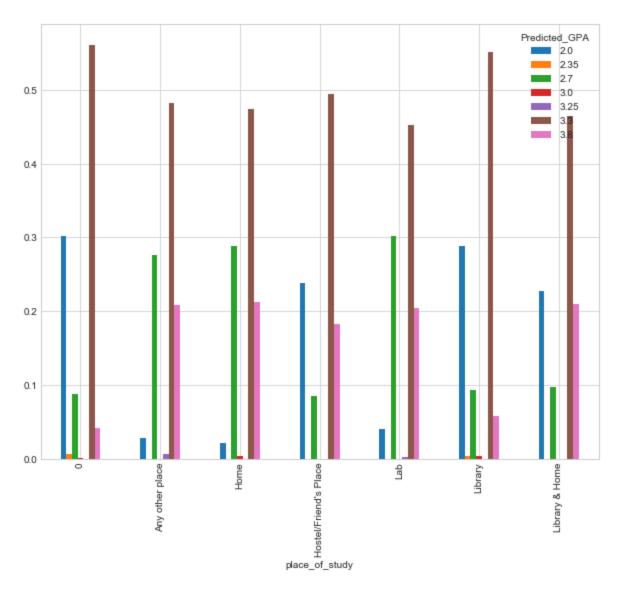

In this figure all parameters are slightly equal but 3.3 CGPA is increasing in each parameter. This figure shows those students refers "Books", "Research paper" and "Notes repair by yourself from lecture" are around 60 % which have 3.3 CGPA ("0" is showing the values in which all Resource parameters are not depending....)

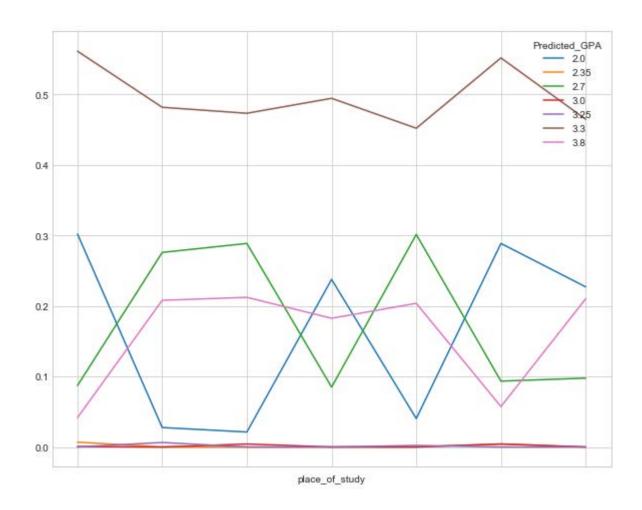

# Place\_of\_study vs Predicted\_GPA......

pd.crosstab(df.place\_of\_study, df.Predicted\_GPA,normalize='index').plot(kind='Bar')
pd.crosstab(df.place\_of\_study, df.Predicted\_GPA,normalize='index').plot(kind='line')
pd.crosstab(df.place\_of\_study, df.Predicted\_GPA,normalize='index')

| Predicted_GPA         | 2.0      | 2.35     | 2.7      | 3.0      | 3.25     | 3.3      | 3.8      |
|-----------------------|----------|----------|----------|----------|----------|----------|----------|
| place_of_study        |          |          |          |          |          |          |          |
| 0                     | 0.302087 | 0.006851 | 0.087200 | 0.000623 | 0.000000 | 0.561507 | 0.041732 |
| Any other place       | 0.027601 | 0.000000 | 0.276008 | 0.000000 | 0.006369 | 0.481953 | 0.208068 |
| Home                  | 0.021231 | 0.000000 | 0.288747 | 0.004246 | 0.000000 | 0.473461 | 0.212314 |
| Hostel/Friend's Place | 0.237792 | 0.000000 | 0.084926 | 0.000000 | 0.000000 | 0.494692 | 0.182590 |
| Lab                   | 0.040340 | 0.000000 | 0.301486 | 0.000000 | 0.002123 | 0.452229 | 0.203822 |
| Library               | 0.288747 | 0.004246 | 0.093418 | 0.004246 | 0.000000 | 0.552017 | 0.057325 |
| Library & Home        | 0.227176 | 0.000000 | 0.097665 | 0.000000 | 0.000000 | 0.464968 | 0.210191 |

In this figure all parameters are slightly equal. But those students which use Library are 55% which have 3.3 CGPA ("0" is showing the values in which all Resource parameters are not depending....)

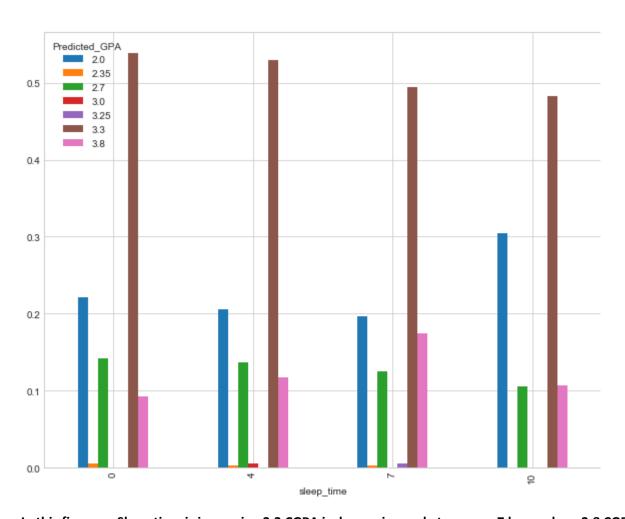

### Sleep\_time vs Predicted\_GPA.....

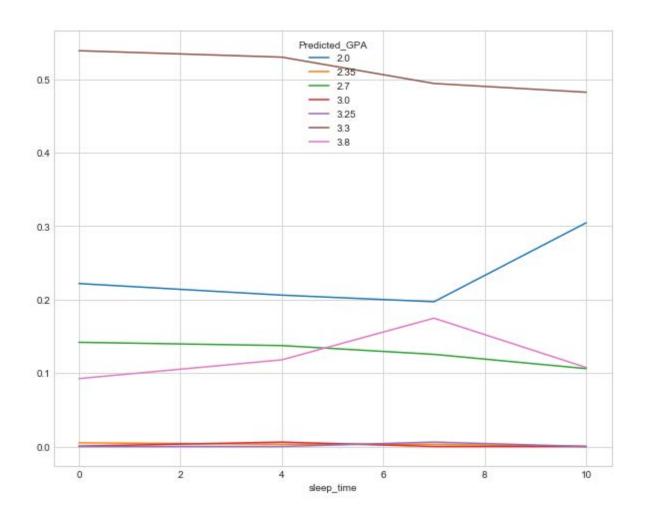

```
pd.crosstab(df.sleep_time, df.Predicted_GPA,normalize='index').plot(kind='Bar')
pd.crosstab(df.sleep_time, df.Predicted_GPA,normalize='index').plot(kind='line')
print('Average Sleep Time in a day {4 hours, 7 hours, 10 hours}')
pd.crosstab(df.sleep_time, df.Predicted_GPA,normalize='index')
```

| Predicted_GPA | 2.0 | 2.35 | 2.7 | 3.0 | 3.25 | 3.3 | 3.8 |
|---------------|-----|------|-----|-----|------|-----|-----|
|               |     |      |     |     |      |     |     |
|               |     |      |     |     |      |     |     |

| sleep_tin | ne |          |          |          |          |         |          |          |
|-----------|----|----------|----------|----------|----------|---------|----------|----------|
|           | 0  | 0.221753 | 0.004966 | 0.141793 | 0.000497 | 0.00000 | 0.538614 | 0.092376 |
|           | 4  | 0.205970 | 0.002985 | 0.137313 | 0.005970 | 0.00000 | 0.529851 | 0.117910 |
|           | 7  | 0.197015 | 0.002985 | 0.125373 | 0.000000 | 0.00597 | 0.494030 | 0.174627 |
|           | 10 | 0.304478 | 0.000000 | 0.105970 | 0.000000 | 0.00000 | 0.482090 | 0.107463 |

In this figure as Sleep time is increasing 3.3 CGPA is decreasing and at average 7 hours sleep 3.8 CGPA is increasing and at average 10 hours sleep 2.0 CGPA is increasing and 3.8 is decreasing. ("0" is showing the values in which all Sleep\_time parameters are not depending....)

### Time\_spend\_on\_social\_media vs Predicted\_GPA.....

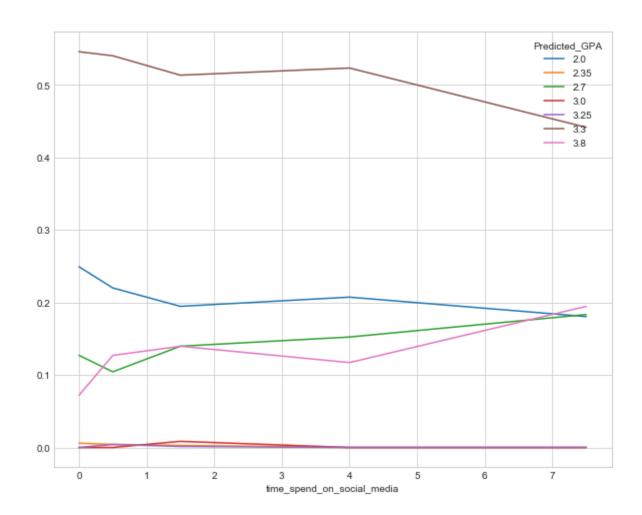

pd.crosstab(df.time\_spend\_on\_social\_media, df.Predicted\_GPA,normalize='index').plot(kind='Bar')
pd.crosstab(df.time\_spend\_on\_social\_media, df.Predicted\_GPA,normalize='index').plot(kind='line')
print('Place of Study {0.5 hours, 1.5 hours, 4 hours, 7.5 hours}')
pd.crosstab(df.time\_spend\_on\_social\_media, df.Predicted\_GPA,normalize='index')

Predicted\_GPA 2.0 2.35 2.7 3.0 3.25 3.3 3.8

| time | spend | on | social | media |
|------|-------|----|--------|-------|
|      |       |    |        |       |

| time_spend_on_social_ | media |          |            |                     |          |          |          |   |
|-----------------------|-------|----------|------------|---------------------|----------|----------|----------|---|
|                       | 0.0   | 0.249297 | 0.005936   | 0.127148            | 0.000000 | 0.000000 | 0.545767 | 0.071853  |
|                       | 0.5   | 0.220028 | 0.004231   | 0.104372            | 0.000000 | 0.004231 | 0.540197 | 0.126939  |
|                       | 1.5   | 0.194640 | 0.002821   | 0.139633            | 0.008463 | 0.001410 | 0.513399 | 0.139633  |
|                       | 4.0   | 0.207334 | 0.000000   | 0.152327            | 0.000000 | 0.000000 | 0.523272 | 0.117066  |
|                       | 7.5   | 0.180536 | 0.000000   | 0.183357            | 0.000000 | 0.000000 | 0.441467 | 0.194640  |
| 0.5                   |       |          |            |                     |          |          | Predic   | sted_GPA<br>2.0<br>2.35<br>2.7<br>3.0<br>3.25<br>3.3<br>8.8 |
| 0.3                   |       |          |            |                     |          |          |          |   |
| 0.2                   |       |          |            |                     |          |          |          |   |
| 0.1                   |       |          |            |                     |          |          |          |   |
| 0.0                   |       | 0.5      | fime_spend | _on_social_n<br>ကို | nedia    | 4.0      | 7.5      |   |

In this figure as time spend on social media is increasing 3.3 CGPA is decreasing and 2.7 CGPA is increasing ("0" is showing the values in which all time spend on social media parameters are not depending....)

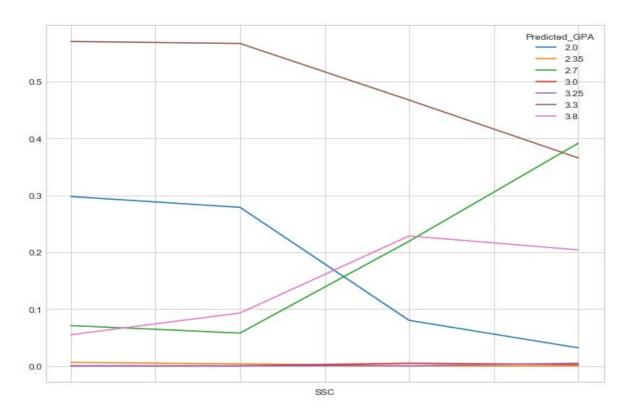

#### SSC vs Predicted\_GPA......

```
pd.crosstab(df.SSC, df.Predicted_GPA,normalize='index').plot(kind='Bar')
pd.crosstab(df.SSC, df.Predicted_GPA,normalize='index').plot(kind='line')
print('SSC Percentage{65%, 70%, 90%}')
pd.crosstab(df.SSC, df.Predicted_GPA,normalize='index')
```

| Predicted_GPA | 2.0      | 2.35     | 2.7      | 3.0      | 3.25     | 3.3      | 3.8      |   |
|---------------|----------|----------|----------|----------|----------|----------|----------|---|
| SSC           |          |          |          |          |          |          |          |   |
| 0             | 0.297811 | 0.006048 | 0.070853 | 0.000000 | 0.000000 | 0.570565 | 0.054724 |   |
| 65%           | 0.278824 | 0.003529 | 0.057647 | 0.000000 | 0.000000 | 0.567059 | 0.092941 |   |
| 70%           | 0.080046 | 0.000000 | 0.219258 | 0.004640 | 0.000000 | 0.467517 | 0.228538 |   |
| 90%           | 0.031653 | 0.000000 | 0.391559 | 0.002345 | 0.004689 | 0.365768 | 0.203986 |   |
| 0.5           |          |          |          |          |          |          | Pred     | icted_GPA<br>20<br>235<br>27<br>3.0<br>3.25<br>3.3<br>3.8 |
| 0.2           | Н        | 1        | +        |          | н        |          | +        |   |
| 0.1           | ŀ        |          |          |          |          |          |          |   |
| 0.0           | _        |          | %<br>8   | SSC      | 70%      |          | %06      |   |

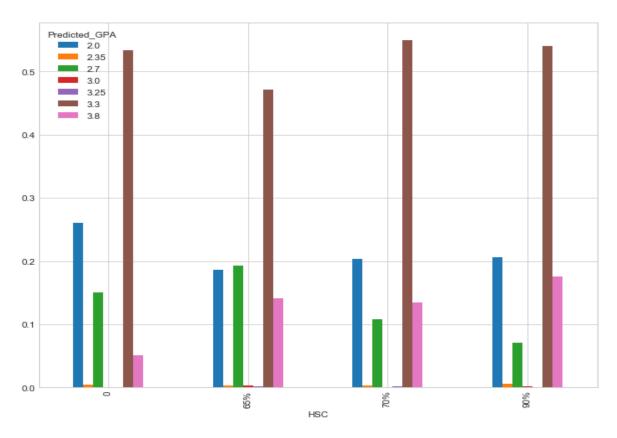

In this figure as SSC percentage is increasing 3.3 CGPA is decreasing, 2.7 and 3.8 CGPA is increasing. ("0" is showing the values in which all SSC parameters are not depending....)

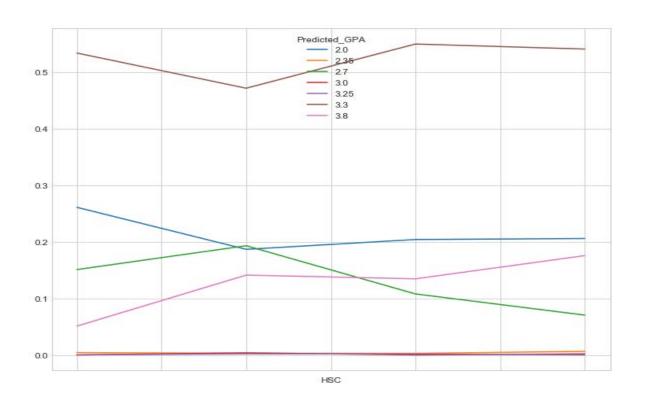

# **HSC vs Predicted\_GPA.....**

pd.crosstab(df.HSC, df.Predicted\_GPA,normalize='index').plot(kind='Bar')
pd.crosstab(df.HSC, df.Predicted\_GPA,normalize='index').plot(kind='line')
print('HSC Percentage{65%, 70%, 90%}')
pd.crosstab(df.HSC, df.Predicted\_GPA,normalize='index')

| Predicted_GPA | 2.0      | 2.35     | 2.7      | 3.0      | 3.25     | 3.3      | 3.8      |
|---------------|----------|----------|----------|----------|----------|----------|----------|
|               |          |          |          |          |          |          |          |

|               |          |          |          |          |          |          |          |
| 0             | 0.260773 | 0.004086 | 0.150817 | 0.000000 | 0.000000 | 0.533432 | 0.050892 |
|               |          |          |          |          |          |          |          |
| 65%           | 0.186533 | 0.002730 | 0.192903 | 0.003640 | 0.001820 | 0.471338 | 0.141037 |
|               |          |          |          |          |          |          |          |
| 70%           | 0.203918 | 0.002671 | 0.107747 | 0.000000 | 0.001781 | 0.549421 | 0.134461 |
|               |          |          |          |          |          |          |          |
| 90%           | 0.205699 | 0.006233 | 0.070347 | 0.001781 | 0.000000 | 0.540516 | 0.175423 |

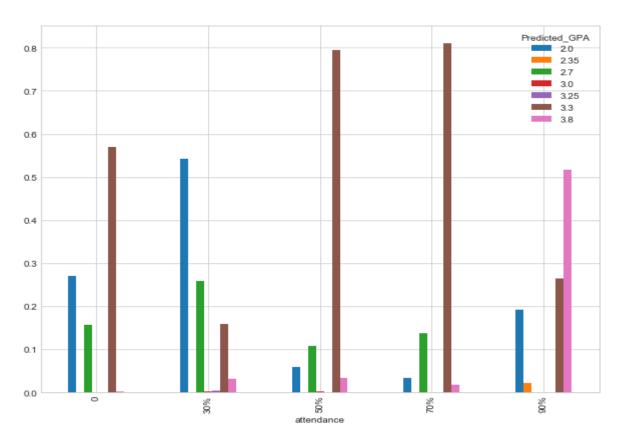

In this figure as HSC percentage is increasing 3.3 and 3.8 CGPA is also increasing. ("0" is showing the values in which all HSC parameters are not depending....)

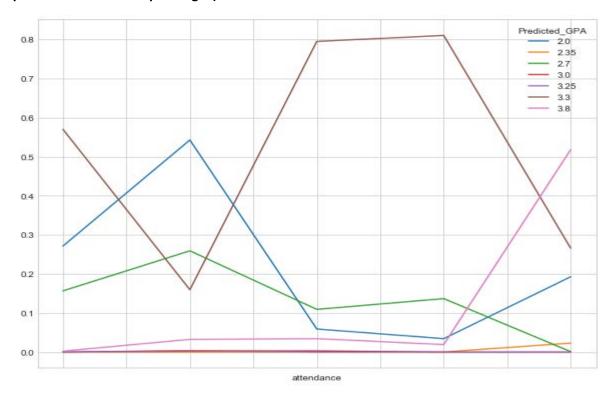

### Attendance vs Predicted\_GPA......

pd.crosstab(df.attendance, df.Predicted\_GPA,normalize='index').plot(kind='bar')
pd.crosstab(df.attendance, df.Predicted\_GPA,normalize='index').plot(kind='line')
print('Average attendance{30%, 50%, 70%, 90%}')
pd.crosstab(df.attendance, df.Predicted\_GPA,normalize='index')

| Predicted_GPA | 2.0      | 2.35    | 2.7      | 3.0      | 3.25     | 3.3      | 3.8      |
|---------------|----------|---------|----------|----------|----------|----------|----------|
| attendance    |          |         |          |          |          |          |          |
| 0             | 0.271280 | 0.00000 | 0.156507 | 0.000000 | 0.000000 | 0.570016 | 0.002197 |
| 30%           | 0.542694 | 0.00000 | 0.259013 | 0.002846 | 0.003795 | 0.159393 | 0.032258 |
| 50%           | 0.058824 | 0.00000 | 0.109108 | 0.002846 | 0.000000 | 0.795066 | 0.034156 |
| 70%           | 0.034156 | 0.00000 | 0.136622 | 0.000000 | 0.000000 | 0.810247 | 0.018975 |
| 90%           | 0.192600 | 0.02277 | 0.000949 | 0.000000 | 0.000000 | 0.265655 | 0.518027 |

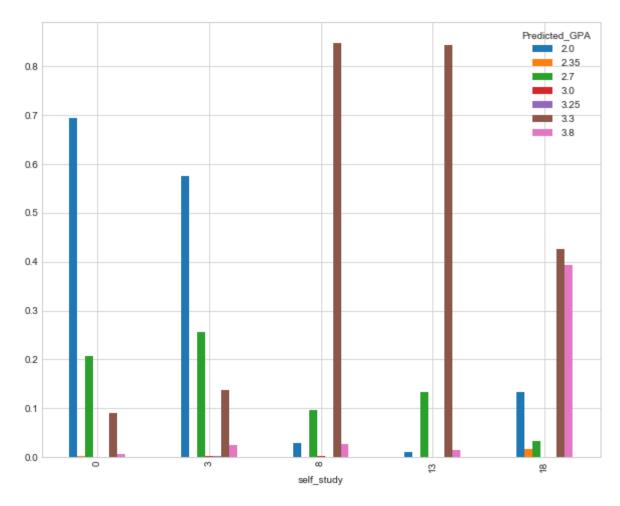

In this figure as Attendance is increasing the 3.3 CGPA is also increasing at 50% and 70% attendance, and at 90% attendance 3.8 CGPA is increasing.("0" is showing the values in which all Attendance parameters are not depending....)

# Self\_study vs Predicted\_GPA.....

pd.crosstab(df.self\_study, df.Predicted\_GPA,normalize='index').plot(kind='Bar')
pd.crosstab(df.self\_study, df.Predicted\_GPA,normalize='index').plot(kind='line')
pd.crosstab(df.self\_study, df.Predicted\_GPA,normalize='index')

| Predicted_GPA | 2.0      | 2.35     | 2.7      | 3.0      | 3.25     | 3.3      | 3.8      |
|---------------|----------|----------|----------|----------|----------|----------|----------|
| self_study    |          |          |          |          |          |          |          |
| 0             | 0.693920 | 0.002096 | 0.207547 | 0.000000 | 0.000000 | 0.090147 | 0.006289 |
| 3             | 0.574820 | 0.000000 | 0.256835 | 0.002158 | 0.002878 | 0.138129 | 0.025180 |
| 8             | 0.028058 | 0.000000 | 0.095683 | 0.002158 | 0.000000 | 0.848201 | 0.025899 |
| 13            | 0.009353 | 0.000000 | 0.132374 | 0.000000 | 0.000000 | 0.843885 | 0.014388 |
| 18            | 0.133094 | 0.016547 | 0.032374 | 0.000000 | 0.000000 | 0.425180 | 0.392806 |

In this figure as if average Self-study Time is 3 hours per week the CGPA is decreasing to 2 CGPA and if average Self-study Time is 8 and 13 hours per week the CGPA is increasing to 3.3 CGPA and if average Self-study Time is 18 hours per week the CGPA is increasing from 3.3 to 3.8 CGPA. ("0" is showing the values in which all Self-study Time parameters are not depending....)
